# **Diaprepes Root Weevil Texas Quarantine Reference**

---

Compiled by: Gage Linville  
Created: April 11th, 2025  
v1.0.0

## **Quarantined Pest:**

The quarantined pest is the Diaprepes root weevil, *Diaprepes abbreviatus* (L) in any living stage of development.

## **Quarantine Regulations:**

The Texas Department of Agriculture's Diaprepes root weevil quarantine regulations are found in the Texas Admin Code: Title 4, Chapter 19, Subchapter P, Rule §§19.160-19.163.

## **Quarantined Articles:**

- a) The quarantined pest.
- b) Soil, sand, or gravel separately or combined with other potting media.
- c) All propagation material including all plants and plant parts.
- d) Citrus plants and all other plants capable of hosting the quarantined pest.
- e) All nursery stock and field grown ornamentals that are potted or balled and burlaped

## **Geographic Areas Subject to Quarantine:**

### **1 Outside Texas:**

- a) The following counties in the State of Florida: Broward, Collier, Dade, DeSoto, Glades, Hendry, Highlands, Hillsborough, Indian River, Lake, Lee, Manatee, Marion, Martin, Orange, Osceola, Palm Beach, Pasco, Polk, Seminole, St. Lucie, Sumter, and Volusia.
- b) Commonwealth of Puerto Rico.
- c) The island of the West Indies.
- d) Any other area where this pest is detected.

### **2 Within Texas:**

- a) Cameron, Harris, and Hidalgo County. The quarantine only applies to specific areas within these counties, and those may be viewed on the Texas Department of Agriculture's website. It is not specified in the Texas Admin Code.
